Frequently Asked Questions

How does it work?

Pretty much like your paper logbook! Except, you don't need a pen or pencil to fill it in. You can:

- Track hours by type (Single or Multiengine, Rotorcraft, Gliders, even balloons)
- Track Instrument Approaches and Time
- Log Training, Cross Country, Solo Time, Pilot in Command, Second in Command, etc.
- Log BOTH Pilot-in-Command AND Second-in-command on the same entry where appropriate
- Record Day and Night landings and time.
- Include almost unlimited comments about the flight.
- Log currency activities that used a PCATD or FTD!

I'm a blimp pilot (or helicopter, or balloon...)

Awesome. I've got ya covered. In addition to all four Airplanes modes, you can log BALLOON, GLIDERS, HELICOPTERS, and AIRSHIPS, too. By the way, call me. I'd love a ride. :)

How do I examine my work?

In short, in just about any way imaginable. Some of the possibilities:

- Look up flights by Tail Number.
- Look up flights that were under Simulated Instruments, that were FILED IFR, and involved a particular airport.
- Compare your hours in Single Engine versus Multi-Engine aircraft!
- Look at EVERYTHING at once and see the bottom line totals.
- Review flights with a particular INSTRUCTOR.

Ok, I can do that with my paper logbook. What can YOU do that I can't?

Simple answer: Find exactly the information you need in a fraction of a second. If you needed to see if you have satisfied the minimum 50-hours of Cross-Country as Pilot-in-Command time (for your instrument rating), you'll have to look at ALL of your cross country flights in your paper logbook, and manually add up the ones in which you were Pilot in Command. Querying the E-Logbook is SO MUCH faster.
